Key Risks	
<p>WHAT ARE THE KEY RISKS OF THIS INVESTMENT?</p> <p>The value of the Fund may rise or fall. These risk factors may cause you to lose some or all of your investment.</p>	<p>Refer to Section 7.1 of the Fund Summary for further information on risks of the ILP Sub-Fund.</p>
Market and Credit Risks	
<p>You are exposed to Interest Rate Risk When interest rates rise, bond values generally fall. This risk is generally greater the longer the maturity of a bond investment and the higher its credit quality.</p> <p>You are exposed to Credit Risk A bond or money market security could lose value if the issuer’s financial health deteriorates.</p> <p>You are exposed to Market Risk The value of investments may be affected by uncertainties such as international, political and economic developments or changes in government policies around the world.</p> <p>You are exposed to Foreign Exchange Risk Changes in currency exchange rates could reduce or increase investment gains or investment losses, in some case significantly.</p>	<p>Refer to Section 7.2 of the Fund Summary for further information on market risk of the Underlying Sub-Fund.</p>
Liquidity Risks	
<p>The Sub-Fund is not listed in Singapore and there is no secondary market for its Shares. You can only redeem your investment on a Dealing Day through HSBC Life.</p> <p>Investment of the Sub-Fund’s assets in relatively illiquid investments may restrict the ability of the Sub-Fund to dispose of its investments at a price and time that it wishes to do so. This may result in a loss to the Sub-Fund.</p>	<p>Refer to Section 7.1 of the Fund Summary for information on liquidity risks of the ILP Sub-Fund and Section 9 of the Fund Summary for further information on Suspension of Dealings of the ILP Sub-Fund.</p>
Product-Specific Risks	
<p>You are exposed to Derivative Risk Financial derivative instruments may be leveraged and their prices can be very volatile. Investment in these instruments may result in losses in excess of the original amount invested. If the issuers of the derivative instruments default, or such securities or their underlying assets cannot be realized, or perform badly, investors may suffer substantial or, in certain cases, total loss of their investments. Governmental regulation and supervision of transactions on the OTC markets is generally lesser than of transactions on organised exchanges. Thus, investing in OTC derivatives involves higher counterparty risk and liquidity risk.</p> <p>You are exposed to Emerging Markets Risk Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity, market volatility (such as interest rate and price volatility) and regulatory risks.</p> <p>You are exposed to Non-Investment Grade Debt / Unrated Debt Risk</p>	<p>Refer to Section 7.2 of the Fund Summary for further information on specific risks of the Underlying Sub-Fund.</p>

The Sub-Fund may invest in fixed income securities that are rated below investment grade or unrated or are high yield. Credit risk may be greater for investments in such securities as they may be subject to a higher risk of default and greater price volatility. Investment grade bonds may be subject to the risk of being downgraded to non-investment grade bonds. In the event of downgrading, the Sub-Fund's investment value in the relevant security may be adversely affected.

You are exposed to Asset-Backed Securities (ABS) Risk

Investment in ABS entails additional risks pertaining to the underlying pool of assets (e.g. receivables) such as credit risk, interest rate risk, prepayment risk, counterparty risk and liquidity risk.

You are exposed to Contingent Convertible Securities (CoCos) Risk

Contingent convertible securities are risky and highly complex instruments that are comparatively untested. Depending on their category, income payments may be cancelled, suspended or deferred by the issuer and they are more vulnerable to losses than equities. Investment in Cocos is subject to trigger level risk, conversion risk, valuation and write-down risk, coupon payments and coupon cancellation risk, capital structure inversion risk, call extension risk, subordinated instruments risk, and unknown risk. This may result in a loss to the Sub-Fund.

You are exposed to China Interbank Bond Market Risk (CIBM)

Investments in the CIBM are subject to these risks: market and liquidity risks, Chinese local credit rating risks, counterparty and settlement risk, operational risk, quasi-Government/local Government bond risk, urban investment bonds risk and regulatory risk.
