Market and Credit Risks

<p>You are exposed to Foreign Exchange Risk The underlying assets of the Sub-Fund may be denominated in currencies other than the currency of the share class you have invested into. The value of your investment may rise or fall in line with movements in the relevant exchange rates.</p> <p>You are exposed to Interest Rate Risk Bonds and other fixed income securities are more susceptible to fluctuation in interest rates and may fall in value if interest rates change. Generally, the prices of bonds and other fixed income securities rise when interest rates fall, whilst their prices fall when interest rates rise.</p> <p>You are exposed to Credit Risk The Sub-Fund's exposure to bonds is subject to the credit risk of the issuers of the bonds. When the issuer of a bond defaults, the Sub-Fund may suffer a loss amounting to the value of such investment. Investment grade bonds may be subject to the risk of being downgraded to non-investment grade bonds. In the event of downgrading, the Sub-Fund's investment value in the relevant security may be adversely affected.</p>	<p>Refer to Section 7.2 of the Fund Summary for further information on market risk of the Underlying Sub-Fund.</p>
Liquidity Risks	
<p>The Sub-Fund is not listed in Singapore and there is no secondary market for its Shares. You can only redeem your investment on a Dealing Day through HSBC Life.</p> <p>Investment of the Sub-Fund's assets in relatively illiquid investments may restrict the ability of the Sub-Fund to dispose of its investments at a price and time that it wishes to do so. This may result in a loss to the Sub-Fund.</p>	<p>Refer to Section 7.1 of the Fund Summary for information on liquidity risks of the ILP Sub-Fund and Section 9 of the Fund Summary for further information on Suspension of Dealings of the ILP Sub-Fund.</p>
Product-Specific Risks	
<p>You are exposed to Non-Investment Grade Debt / Unrated Debt Risk The Sub-Fund may invest in fixed income securities that are rated below investment grade or unrated or are high yield. Credit risk may be greater for investments in such securities as they may be subject to a higher risk of default and greater price volatility.</p> <p>Investment grade bonds may be subject to the risk of being downgraded to non-investment grade bonds. In the event of downgrading, the Sub-Fund's investment value in the relevant security may be adversely affected.</p> <p>You are exposed to Asset-Backed Securities (ABS) and Mortgage-Backed Securities (MBS) Risk Investment in ABS and MBS entails additional risks pertaining to the underlying pool of assets (e.g. receivables) such as credit risk, interest rate risk, prepayment risk, counterparty risk and liquidity risk.</p> <p>You are exposed to Contingent Convertible Securities (CoCos) Risk Contingent convertible securities are risky and highly complex instruments that are comparatively untested. Depending on their category, income payments may be cancelled, suspended or deferred by the issuer and they are more vulnerable to losses than equities. Investment in Cocos is subject to trigger level risk, conversion risk, valuation and write-down risk, coupon payments and coupon cancellation risk, capital structure inversion risk, call extension risk, subordinated instruments risk, and unknown risk. This may result in a loss to the Sub-Fund.</p> <p>You are exposed to Derivative Risk Financial derivative instruments may be leveraged and their prices can be very volatile. Investment in these instruments may result in losses in excess of the original amount invested. If the issuers of the derivative instruments default, or such securities or their underlying assets cannot be realized, or perform badly, investors may suffer substantial or, in certain cases, total loss of their investments. Governmental regulation and supervision of transactions on the OTC markets is generally lesser than of transactions</p>	<p>Refer to Section 7.2 of the Fund Summary for further information on specific risks of the Underlying Sub-Fund.</p>

on organised exchanges. Thus, investing in OTC derivatives involves higher counterparty risk and liquidity risk.
