<p>Australia and New Zealand but excluding Japan). The portfolio of the Trust will be broadly diversified with no specific industry or sectoral emphasis.</p> <p>Currently, the Managers intend to declare quarterly distributions at a variable percentage per annum, of the NAV per Unit to Holders of the Class SGD A Dis Units and the Class USD A Dis Units on or around 31 March, 30 June, 30 September and 31 December of each year. The Managers may (with the consent of the Trustee) determine that distributions be paid from the capital of the relevant Class. Where distributions are paid out of the capital of the relevant Class, the NAV of the relevant Class will be reduced.</p>	
Investment Strategy	
<p>The investment philosophy of the Managers is founded on the belief that returns over the long term are determined by economic and corporate fundamentals and that the analysis of those factors should be the foundation of the Managers' investment strategy. Given that equity markets are not efficient in Asia and that many of the best investment ideas are not well researched, the Managers believe its style of active management with emphasis on bottom-up stock analysis will add value.</p> <p>The Managers' approach is to capitalize on the Schroder group's strong in-house research capability and exploit market inefficiencies.</p> <p>Over the longer term, the Managers believe that share prices should reflect the ability of companies to create value for shareholders. As such, the distinctive focus of its research is to identify companies that have robust business models, good corporate governance and strong management teams to drive shareholder returns.</p> <p>The NAV of the Trust is likely to have a high volatility due to its investment policies or portfolio management techniques.</p>	<p>Refer to Section 5 of the Fund Summary for the further information on the investment focus and approach of the ILP Sub-Fund.</p>

Product-Specific Risks

You are exposed to equity risk.

The Trust may invest in stocks and other equity securities and their derivatives which are subject to market risks that historically have resulted in greater price volatility than that experienced by bonds and other fixed income securities.

You are exposed to foreign securities risk.

Investments in securities throughout the world are subject to numerous risks resulting from market and currency fluctuations, future adverse political and economic developments, the possible imposition of restrictions on the repatriation of currency or other governmental laws or restrictions, reduced availability of public information concerning issuers and the lack of uniform accounting, auditing and financial reporting standards or of other regulatory practices and requirements comparable to those applicable to companies in your domicile. In addition, securities of companies or governments of some countries may be illiquid and their prices volatile and, with respect to certain countries, the possibility exists of expropriation, nationalization, exchange control restrictions, confiscatory taxation and limitations on the use or removal of funds, or other assets, including withholding of dividends.

You are exposed to derivatives risks.

The Trust may use derivatives. The use of futures, options, warrants, forwards, swaps or swap options involves increased risks. The Trust's ability to use such instruments successfully depends on the Managers' ability to accurately predict movements in stock prices, interest rates, currency exchange rates or other economic factors and the availability of liquid markets. If the Managers' predictions are wrong, or if the derivatives do not work as anticipated, the Trust could suffer greater losses than if the Trust had not used the derivatives.

You are exposed to risks relating to China A-shares and China B-shares.

In addition to China A-shares, the Trust may also invest in China B-shares listed within mainland China. The mainland China markets on which China A-shares and China B-shares are traded have in the past experienced significant price volatility and there can be no assurance that such volatility will not occur in the future. These markets may be more volatile and unstable (for example, due to the risk of suspension of a particular stock or government intervention) than markets in more developed countries. Market volatility and potential lack of liquidity (for example, low liquidity in respect of China B-shares due to low trading volume) may result in prices of securities traded on the mainland China markets to fluctuate significantly. As a result, the NAV of the Trust may be adversely affected.

You are exposed to risks associated with investing through the Shanghai-Hong Kong Stock Connect and the Shenzhen-Hong Kong Stock Connect (collectively and individually referred to as the "Stock Connect").

The Trust may invest in China A-Shares of mainland China through the Shanghai-Hong Kong Stock Connect and/or the Shenzhen-Hong Kong Stock Connect.

Refer to Section 7.2 of the Fund Summary for further information on specific risks of the Underlying Sub-Fund.
